PW SKILLS

Pseudo Element

Pseudo-element selectors are used to style a specific part of an element.

They start with a double colon (::)

```
/* Syntax of Pseudo element */
selector::pseudo-element {
    /* property: value; */
}
```

Pseudo Element
- ::after
- ::before
- ::first-letter
- ::first-line
- ::selection
- ::placeholder
- ::maker

::after

The pseudo-element selector "::after", is used to insert content after the content of an element.

```css
style.css

p::after {
    content: " afer";
    color: red;
}
/* This will add a content of "after" to the
element and change the particular text color to
red*/
```

Browser output

Pseudo element selector - after

:: before

The pseudo element selector ":: before", is used to insert content before the content of an element.

```css
p::before {
    content: "before";
    color: red;
    }
/* This will add a content of "before" to the element
and change the particular text color to red*/
```

Browser output

Before - Pseudo element selector

:: first-letter

The pseudo element selector ":before", is used to insert content before the content of an element.

```css
style.css

p::before {
        content: "after";
        color: red;
        }
/* This will add a content of "before" to
the element and change the particular text
color to red*/
```

Browser output
